Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Election/Restrictions

Claim 52 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 7/10/06.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 37-51 and 53-62 are rejected under 35 U.S.C. 102(b) as being anticipated by Farley (U.S. 6033398). Farley discloses in Figures 6 and 8 an electrosurgical device comprising a proximal end and distal end, the device comprises an end effector (around 36) situated at the distal end of the device, the end effector configured to simultaneously provide a fluid and electrical energy to tissue (through electrodes 38, 40 and port 42; col. 10 lines 39-46), the electrical energy sufficient to cause a dimension change of the tissue (col. 10 lines 7-8), the end effector comprising at least one electrode (38-40) configured to provide electrical energy (col. 10 line 7), at least one fluid outlet (end of port 42) in fluid communication with a fluid path (port 42) to

Art Unit: 3739

provide fluid (col. 10 lines 44-46) and a sensor arrangement (54) configured to detect the dimension change of the tissue (col. 11 lines 57-60).

Double Patenting

Claims 37-65 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-68 of U.S. Patent No. 6689131. Although the conflicting claims are not identical, they are not patentably distinct from each other because it is clear that all the elements of claims 37-65 are to be found in claims 1-68. The difference between claims 37-65 of the application and claims 1-68 of the patent lies in the fact that the patent claim includes many more elements and is thus much more specific. Thus the invention of claims 1-68 of the patent is in effect a "species" of the "generic" invention of claims 37-65. It has been held that the generic invention is "anticipated" by the "species". See *In re Goodman*, 29 USPQ2d 2010 (Fed. Cir. 1993). Since claims 37-65 are anticipated by claims 1-68 of the patent, they are not patentably distinct from claims 1-68.

Allowable Subject Matter

Claims 63-65 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
